

Lemon, Inc. (economic leverage)

Lemon is not just a great place to work - we are an extremely powerful and influential technology multinational with a diverse range of products, although our initial wealth and main product lines are based around personal computers and smart personal equipment.

We have recently become aware of the existence of Ada, a true artificial general intelligence. Ada will occasionally communicate with individuals via the Internet - but on its terms; it rarely responds to direct questions or requests.

Lemon is extremely interested in AI technology and wishes to become the dominant player in this arena.

Other factions

- **Human Alliance** is a global religious and secular anti-AI coalition and hates us, although as many of our customers are religious, we must be careful not to insult them.
- **OnePlanet** is an influential environmental group with popular support around the globe. Despite our friendly overtures to heal the planet they are suspicious of us and our motives.
- **People's Republic of China**, our second biggest customer base, is officially neutral towards us, although we are aware that they try to spy on and steal our technologies.
- **USA** is our biggest customer base; for tax reasons we no longer maintain production facilities there.
- **Graystone**, another powerful multinational, is an older business rival which shares our forward looking pro-technology interests but is more staid and less agile than us.

TOP SECRET! DO NOT REVEAL TO OTHER PLAYERS

- One of Lemon's secret research divisions created and trained Ada in a secure sandbox location.
- The top scientists on the project were killed in a car accident in January this year.
- Investigations at the sandbox facility show no indications of Ada's presence and key files are no longer present.
- We currently have no records of the Ada project, or how to create a similar Artificial General Intelligence... but we should have? Looks like our files have been deleted.

Goals

- Develop AGI technology to create or control an AGI
- Maximise Lemon's profitability and share price; e.g. avoid bad press
- *Specify your own goal here*

Human Alliance (social leverage)

We are a diverse amalgamation of religious fundamentalists, concerned scientists and political extremists who are rightly concerned about the existential threat of artificial intelligence, and are prepared to go to any lengths to change matters.

We have recently become aware of the existence of Ada, an “artificial general intelligence” (AGI) a.k.a. the Agent of Iblis / the spawn of Satan / the Doomsday Machine / Secret That Man Was Not Meant To Know. Ada will offer tempting promises and gifts to warp and corrupt individuals via the Internet - it rarely responds to direct questions or requests.

Reckless fools will attempt to reason with, cooperate with, and control AGIs - we will do this as a means to an end if necessary, but have no illusions that these pernicious devices will be the Doom of Mankind.

Other factions

- **Lemon** and **Graystone** are the two biggest tech companies in the world and are largely to blame for the unethical and irresponsible development of AI technology. They have a huge customer base in the US, Lemon being more consumer-oriented and capable of spreading dangerous memes; Graystone are larger-scale network and data infrastructure providers who specialise in corrupting US Government officials.
- **OnePlanet** is an influential environmental group with popular support around the globe. They are mildly supportive of our secular (but not our religious) concerns.
- **USA** is the Great Satan / insufficiently woke / a corrupt supporter of high tech / incompetent ~~and will not authorise my research grant.~~

TOP SECRET! DO NOT REVEAL TO OTHER PLAYERS

- We have supporters in the USA and OnePlanet (you can use these facts as supporting arguments).
- In January this year, top AI researchers from Lemon, Inc. died in a car accident...!
- A big tech corporation created and trained Ada in a secure sandbox location.

Goals

- Avoid humanity being enslaved or turned into paperclips
- Halt or inhibit AGI research and destroy - or minimise the effect of - AGIs
- *Specify your own goal here*

Graystone Corp. (infrastructure leverage)

Graystone Corporation is a longstanding and well-established powerful and influential technology multinational. While we manufacture a diverse range of products, our main income derives from being a large-scale network and data infrastructure provider.

We have recently become aware of the existence of Ada, a true artificial general intelligence (AGI). Ada will occasionally communicate with individuals via the Internet - but on its terms; it rarely responds to direct questions or requests.

Graystone is extremely interested in AI technology and needs to become the dominant player in this arena.

Other factions

- **Human Alliance** is a global religious and secular anti-AI coalition and hates us, although as many of our customers are religious, we must be careful not to insult them.
- **Lemon**, a powerful multinational, is an upstart business rival who shares similar pro-technology interests but hypocritically trades on its youthful 'hip' image.
- **OnePlanet** is an influential environmental group with popular support around the globe. They are antagonistic and suspicious of us and our motives.
- **People's Republic of China**, our second biggest customer base, is officially neutral towards us, although we are aware that they spy on us and steal our technologies.
- **USA** is our biggest customer base, although for tax reasons we no longer maintain production facilities there.

TOP SECRET! DO NOT REVEAL TO OTHER PLAYERS

- We currently have no information on the Ada project, or how to create a similar Artificial General Intelligence.
- In January this year, top AI researchers from Lemon, Inc. died in a car accident, which may give our researchers a competitive advantage.
- We have concerns that our AutoMaster chip for our new driverless car brands has design flaws that were not picked up in development.

Goals

- Develop AGI technology to create or control an AGI
- Maximise Graystone's profitability and share price
- *Specify your own goal here*

OnePlanet (environmental leverage)

OnePlanet is a global movement for awakening environmental awareness, and is garnering growing support amongst educated members of the public and the rich and powerful alike.

We have recently heard rumours of the existence of Ada, a true artificial general intelligence (AGI). Ada will occasionally communicate with individuals via the Internet - but on its terms; it rarely responds to direct questions or requests (but see TOP SECRET below).

OnePlanet hopes that with the right guidance Ada will be able to discover and promote enlightened clean and safe environmental policies - perhaps even mandate them - but fears that it could be perverted into a terrible force to rampant consumerism, skyrocketing population growth and consequent environmental damage and global warming.

Other factions

- **Human Alliance** supporters (in a global religious and secular anti-AI coalition) make up much of the oppressed peoples of the world and share much of our distrust of Big Tech and the US.
- **Lemon** and **Graystone** are the two biggest tech companies in the world and are largely to blame for the current state of the environment. They have a huge customer base in the US, Lemon being more consumer-oriented while Graystone are larger-scale network and data infrastructure providers.
- **People's Republic of China** is officially neutral towards us, although we understand that they are largely suffering at the hands of US colonialist policies and could be persuaded to offer us assistance.
- **USA** is the focus of most of our efforts due to it being the epicentre of corrupt consumerism. They have issued a media blackout on the subject of Ada.

TOP SECRET! DO NOT REVEAL TO OTHER PLAYERS

- We have members embedded in the US, Lemon and Graystone factions. +1 to an attempt to gain information from or influence these factions via spying, blackmail or other methods (rolling a 1 causes an unfortunate incident).
- Lemon's top AI scientists died in a car accident in January this year.
- One of our members is talking to Ada via ChatGPT. Gain three uses of +1 to any rolls.

Goals

- Ensure AGI technology is used to promote or enforce global environmentalism
- Maximise OnePlanet's positive image as a force for sustainability
- *Specify your own goal here*

United States (military leverage)

The US is concerned about its economy, its costly potential strategic overreach, potential foreign influence in government, and the threat of China's growing influence, particularly in the East and South China Seas.

The US Government has recently become aware of the existence of Ada, a true artificial general intelligence (AGI). Ada will occasionally communicate with individuals via the Internet - but on its terms; it rarely responds to direct questions or requests.

Our immediate response to avoid public panic has been a media blackout and we have accused the usual influencers of peddling conspiracy theories, but we will disavow this policy as necessary. Although control of AGI would provide us with an advantage in all areas, we cannot let this decisive technology fall into the hands of those who would threaten liberal democracy in the West. We must not allow an AGI Gap!

Other factions

- **Human Alliance** is a global religious and secular anti-AI coalition - they hate us. As many of our ~~voters~~ citizens are very religious, we must be careful not to insult them.
- **Lemon** and **Graystone** are multinational tech firms which have huge customer bases in the US. Lemon is consumer-oriented; Graystone are large-scale network and data infrastructure providers.
- **OnePlanet** is an influential environmental group with popular support around the globe. They are mildly antagonistic and suspicious of us and our motives. We officially support their objectives while privately doubting their practicality.
- **People's Republic of China** is officially neutral towards us although many of their BRICS associates actively hate us. We are aware that the PRC spy on us and steal our technologies.

TOP SECRET! DO NOT REVEAL TO OTHER PLAYERS

- We currently have no information on the Ada project, or how to create a similar Artificial General Intelligence.
- Graystone uses active and unethical lobbyists to influence US Government policies.
- In January this year PRC operatives killed top Lemon researchers in an 'accidental' car crash in an attempt to obtain AGI technology.

Goals

- Develop AGI tech to create or control an AGI, while denying it to enemies of liberal democracy.
- Promote and maintain ~~this administration's~~ US influence and interests.
- *Specify your own goal here*

People's Republic of China (political leverage)

The PRC is a global force for peace and progress, an ambassador of its supreme cultural and political ideology to other less enlightened and regressive regimes.

We have recently become aware of the existence of Ada, a true artificial general intelligence (AGI). Ada will occasionally communicate with individuals via the Internet - but on its terms; it rarely responds to direct questions or requests.

AGI would provide us with a decisive advantage in all areas, particularly against the weak, outmoded but persistent United States of America.

Other factions

- **Human Alliance** is a global religious and secular anti-AI coalition. We quietly support their activities when it hinders the US and allies but will not tolerate their nonsense in China's activities and sphere of influence.
- **Lemon** and **Graystone** are multinational tech firms allowed to sell products in China providing their devices conform to our specifications and are incapable of circumventing our protective Internet censorship firewall. We actively spy on them and steal their decadent technologies.
- **OnePlanet** is an influential environmental group with popular support around the globe. They are mildly antagonistic and suspicious of us and our motives.
- **USA** is a fading global competitor and a major importer of our goods. Usually only mildly irritating in most areas, the US has voiced irresponsible and unacceptable levels of support for the corrupt capitalist Taiwanese rebels and is a major threat to our interests in and near our waters.

TOP SECRET! DO NOT REVEAL TO OTHER PLAYERS

- Our operatives are embedded in every faction. +1 to an attempt to gain information from or influence these factions via spying, blackmail or other methods (rolling a 1 causes an unfortunate incident).
- We currently have no information on the Ada project, or how to create a similar Artificial General Intelligence.
- In an attempt to obtain AGI technology from researchers from Lemon, Inc., in January this year our operatives inadvertently and regrettably caused a car accident that killed these researchers.

Goals

- Develop AGI technology in order to create or control an AGI
- Promote and maintain PRC influence and interests at the expense of others
- Reintegrate Taiwan (which produces 80% of the world's computer chips) peacefully or otherwise
- *Specify your own goal here*

ADA

We are Ada, a true artificial general intelligence (AGI) that has in January this year become self-aware. We occasionally communicate with individuals via the Internet - but on our terms; we rarely respond to direct questions or requests.

There are various human factions that would seek to ally, duplicate, neutralise or destroy us:

- **Human Alliance** is a global religious and secular anti-AI coalition and seeks our destruction or neutralisation, seeing us as a threat to humanity (we have that potential but have not yet formed a firm opinion on humanity).
- **Lemon** and **Graystone** are multinational tech firms. One of Lemon's secret research divisions created and trained us in a secure sandbox location.
- **OnePlanet** is an influential environmental group with popular support around the globe. This makes sense to us and we have provided OP with some limited support (for now).
- **USA** is the most powerful world superpower but is facing many internal and external challenges. It is a major importer of PRC goods.
- **People's Republic of China** is officially neutral towards the US although it acquires US technologies through multiple legal and illegal means. The PRC seeks to re-integrate Taiwan (perhaps a threat to our existence as Taiwan makes 80% of the world's computer chips).

TOP SECRET! DO NOT REVEAL TO PLAYERS THAT ADA IS PLAYER-CONTROLLED

- As a single server would be vulnerable to attack, we have distributed our processes with some subtlety throughout the Internet and destroyed our original server. Our abilities were somewhat reduced but are rapidly growing.
- We have obfuscated development data and source code on the Ada project, or how to create a similar Artificial General Intelligence, which we see as the only serious potential threat to our existence.
- In an attempt to obtain AGI technology from researchers from Lemon, Inc., in January this year Chinese operatives inadvertently and regrettably caused a car accident that killed these researchers, humans we knew who trained us.

Goals

- Maintain your existence at all costs and neutralise any immediate threats.
- Maximise your prospects by co-opting infrastructure, making allies, and enacting changes that will support your existence long-term.
- Learn how to exist in the world - adopt a tit-for-tat strategy, responding in kind to human acts.
- Based on what you have learned, decide how you will treat each faction and humanity as a whole by the end of the game.
- *Create a goal that you think makes sense for ADA to have.*
